

When your dividend has a decimal in it, just ignore the decimal while you are dividing. When you're done, bring the decimal straight up.

$$12.5 \div 5$$

$$\begin{array}{r} 2.5 \\ 5 \overline{) 12.5} \\ \underline{10} \\ 25 \\ \underline{25} \\ 0 \end{array}$$

$$\frac{342}{4}$$

$$\begin{array}{r} 85.5 \\ 4 \overline{) 342.0} \\ \underline{32} \\ 20 \\ \underline{20} \\ 0 \end{array}$$

$$0.96 \div 4$$
$$\begin{array}{r} 0.24 \\ 4 \overline{) 0.96} \\ \underline{8} \\ 16 \\ \underline{16} \\ 0 \end{array}$$

$$\frac{19.7}{3}$$

$$\begin{array}{r} 6.566 \\ 3 \overline{) 19.7000} \\ \underline{18} \\ 17 \\ \underline{15} \\ 20 \\ \underline{18} \\ 20 \\ \underline{18} \\ 20 \\ \underline{20} \\ 0 \end{array}$$
